Activity 7 Menyimpan data dan membaca data menggunakan database MySQL

1. Buka project SQLite yang lalu, kemudian salinlah kedalam projek baru beberapa java class dan layoutnya. Seperti (Mainactivity.java, TemanAdapter.java, Teman.java, activity_main.xml dan row_data_teman,xml).

3. Buka MySQL dengan menggunakan browser anda → Buat database baru dengan nama "tiumy"

→ buatlah tabel didalam database yang baru saja dibuat dengan nama tabel "teman"

→ tambahkan 3 kolom didalam tabel tersebut dengan masing-masing nama kolom dan keterangannya seperti pada gambar dibawah

4. Buka folder instalasi xampp → buka folder "htdoc" → buat file php dengan cara → buka notepad → tulis syntax untuk menampilkan data dari database

```
₽<?php
           //deklarasi alamat server
           $server = "localhost";
 5
           //deklarasi username
           $user = "root";
 8
           //deklarasi nama database
          $namadb = "tiumy";
11
12
13
          //deklarasi password
$password ="";
15
           //membuat koneksi kedalam database
           $conn = mysqli_connect($server, $user, $password, $namadb) or die ("Koneksi gagal");
16
           //membuat yang berisi query untuk menampilkan data
18
19
           $result = mysqli_query($conn, "select * from teman");
21
           //membuat variabel json yang berjenis data array
           $json = array();
23
24
           //membaca isi data dari database
           while ($row = mysqli_fetch_assoc($result)){
26
27
           $json[] = $row;
28
29
           echo json_encode($json);
30
           mysqli_close($conn);
31
32
```

→ simpan didalam folder "umyTI" dengan nama file "bacateman.php" → buat satu buah file php untuk menyimpan data kedalam MySQL → buka notepad → tulis syntax untuk menyimpan data kedalam database

```
$server = "localhost";
$user = "root";
$namadb = "tiumy";
$password = "";

$conn = mysqli_connect($server, $user, $password, $namadb) or die ("Koneksi gagal");

$nama = $_POST['nama'];
$telpon = $POST ['telpon'];

class emp()

$query = mysqli_query($conn,"INSERT INTO teman (nama, telpon) VALUES ('$nama', '$telpon')")

if ($query) {
    $response = new emp();
    $response -> message = "Data berhasil disimpan";
    die(json_encode($response));
}

else {
    $response -> success = 0;
    $response -> success = 0;
    $response -> buccess = 0;
    $response -> message = "Gagal menyimpan data";
    die(json($response));
}
```

- → simpan didalam folder "umyTI" dengan nama file "tambahtm.php"
- 5. Buka android studio → buka projek yang sudah disiapkan pada Langkah pertama → buka "buld.graddle" → Tambahkan library yang akan digunakan untuk membantu menghubungkan aplikasi dengan database, seperti pada gambar dibawah

```
31
      dependencies {
32
33
            implementation 'androidx.appcompat:appcompat:1.3.0'
34
            implementation 'com.google.android.material:material:1.3.0'
            implementation 'androidx.constraintlayout:constraintlayout:2.0.4'
35
           implementation 'com.android.volley:volley:1.2.0'
            testImplementation 'junit:junit:4.+'
38
            androidTestImplementation 'androidx.test.ext:junit:1.1.2'
39
            androidTestImplementation 'androidx.test.espresso:espresso-core:3.3.0'
40
```

→buka MainActivity.java → tambahkan beberapa variable baru seperti pada gambar

```
dibawah
```

```
public class TambahTeman extends AppCompatActivity {
    private EditText editNama,editTelpon;
    private Button simpanBtn;
    String nm,tlp;
    int success;

    private static String url_insert = "http://10.0.2.2/umyTI/tambahtm.php";
    private static final String TAG = TambahTeman.class.getSimpleName();
    private static final String TAG_SUCCES = "success";
```

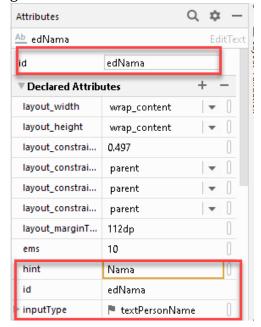

→ hapus isi dari method "BacaData()" → masukkan syntax untuk membaca data dari database seperti pada gambar dibawah

```
63 public void BacaData(){
64
65
                RequestQueue requestQueue = Volley.
   newRequestQueue(getApplicationContext());
66
67
                JsonArrayRequest jArr = new JsonArrayRequest(
   url_select,new Response.Listener<JSONArray>() {
68
                    @Override
69
                    public void onResponse(JSONArray response
   ) {
70
                        Log.d(TAG, response.toString());
71
                        // Parsing json
72
73
                        for (int i = 0; i < response.length</pre>
   (); i++) {
74
75
                                 JSONObject obj = response.
   getJSONObject(i);
76
77
                                Teman item = new Teman();
78
79
                                item.setId(obj.getString(
   TAG_ID));
80
                                item.setNama(obj.getString(
   TAG_NAMA));
                                item.setTelpon(obj.getString(
81
   TAG_TELPON));
82
83
                                 // menambah item ke array
84
                                temanArrayList.add(item);
85
                            } catch (JSONException e) {
                                e.printStackTrace();
86
                            }
87
88
                        }
89
90
                }, new Response.ErrorListener() {
92
                    public void onErrorResponse(VolleyError
   error) {
93
                        VolleyLog.d(TAG, "Error: " + error.
   getMessage());
94
                        error.printStackTrace();
95
                        Toast.makeText(MainActivity.this,"
   gagal",Toast.LENGTH_SHORT).show();
96
                    }
97
               });
98
                requestQueue.add(jArr);
99
```

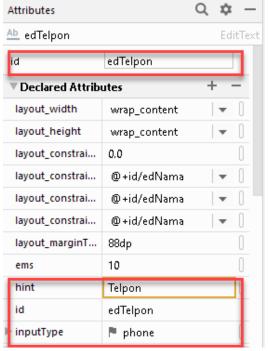

6. Tambahkan activity baru yan akan digunakan untuk memasukkan data kedalam database dengan nama "TambahTeman" → buka "activity_tambah_teman.xml" → tambahkan 2 edittext dan 1 button, sehingga tampilan dari layout tersebut akan menjadi seperti pada gambar dibawah

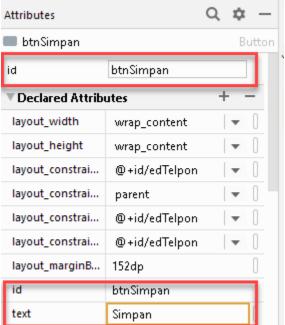

→ Buka atribut pada edittext yang pertama → kemudian ubah id dari edittext tersebut menjadi "edNama" kemudian ubah isi atribut "hint" menjadi "Nama" dan ubah "inputType" menjadi "textPersonName", sehingga akan menjadi seperti pada gambar

→ Buka atribut pada edittext yang kedua → kemudian ubah id dari edittext tersebut menjadi "edTelpon" kemudian ubah isi atribut "hint" menjadi "Telpon" dan ubah "inputType" menjadi "phone", sehingga akan menjadi seperti pada gambar dibawah

→ Buka atribut pada button → kemudian ubah id dari button tersebut menjadi "btnSimpan" kemudian ubah isi atribut "text" menjadi "Simpan" sehingga akan

7. Buka "TambahTeman.java" → tambahkan beberapa variable seperti pada gambar dibawah

→ buat method baru dengan nama "SimpanData()" → tambah code untuk menyimpan data kedalam database sesuai dengan gambar dibawah

```
52 public void SimpanData()
53
       {
   if (editNama.getText().toString().equals("")||
editTelpon.getText().toString().equals("")){
54
                Toast.makeText(TambahTeman.this, "Semua harus
55
   diisi data",Toast.LENGTH_SHORT).show();
           }
57
            else
58
            {
59
                nm = editNama.getText().toString();
60
                tlp = editTelpon.getText().toString();
61
                RequestQueue requestQueue = Volley.
62
   newRequestQueue(getApplicationContext());
63
64
                StringRequest strReq = new StringRequest(
   Request.Method.POST, url_insert, new Response.Listener<
   String>() {
65
                    @Override
                    public void onResponse(String response) {
66
                         Log.d(TAG, "Response: "+response.
67
   toString());
68
69
                         try{
                             JSONObject jObj = new JSONObject(
70
   response);
71
                             success = jObj.getInt(TAG_SUCCES);
72
                             if (success == 1){
                                 Toast.makeText(TambahTeman.
73
   this, "Sukses simpan data", Toast.LENGTH_SHORT).show();
74
                             }else{
75
                                 Toast.makeText(TambahTeman.
   this, "gagal", Toast.LENGTH_SHORT).show();
76
                             }
77
                         }catch(JSONException e){
78
                             e.printStackTrace();
79
                         }}
80
                },new Response.ErrorListener(){
81
                    @Override
82
                    public void onErrorResponse(VolleyError
   error){
                         Log.e(TAG, "Error : "+error.getMessage
83
   ());
84
                         Toast.makeText(TambahTeman.this, "Gagal
    simpan data",Toast.LENGTH_SHORT).show();
85
                    }
 86
87
                 }){
 88
                     @Override
89
                     protected Map<String,String> getParams(){
                          Map<String,String> params = new
    HashMap<>();
 91
 92
                          params.put("nama",nm);
 93
                          params.put("telpon",tlp);
 94
 95
                          return params;
 96
 97
                 };
                 requestQueue.add(strReq);
 98
 99
             }
100
        }
```

→ tambahkan method "SimpanData()" kedalam event button onclick, sehingga

tampilannya akan menjadi seperti pada gambar dibawah

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_tambah_teman);

editNama = findViewById(R.id.edNama);
    editTelpon = findViewById(R.id.edTelpon);
    simpanBtn = findViewById(R.id.btnSimpan);

simpanBtn.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View v) {
            SimpanData();
        }
     });
}
```

8. Buka "AndroidManifest.xml" → tambahkan permission atribut pada tag "application", sehingga tampilan dari "AndroidManifest.xml" akan menjad seperti pada gambar dibawah

```
<?xml version="1.0" encoding="utf-8"?>
Kmanifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.tanjung.mysqlpro">
    <uses-permission android:name="android.permission.INTERNET"</pre>
    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="MySQLpro"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportsRtl="true"
         android:theme "@style/Theme:MySQLpro
        android:usesCleartextTraffic="true">
        <activity android:name=".TambahTeman"></activity>
        <activity android:name=".MainActivity">
             <intent-filter>
                 <action android:name="android.intent.action.MAIN" />
                 <category android:name="android.intent.category.LAUNCHER" />
             </intent-filter>
        </activity>
    </application>
```

</manifest>

9. Jalankan aplikasinya menggunkan emulator yang terdapat pada android studio. Jika anda menjalankan aplikasi tesebut menggunakan smartphone anda, aplikasi tersebut tidaka dapat digunakan untuk menampilkan data dan menyimpan data database dikarekanakan database tersebut bersifat local.

1. Tampilan code untuk "build.graddle"

```
1 plugins {
       id 'com.android.application'
 2
 3 }
 4
5 android {
 6
       compileSdkVersion 30
       buildToolsVersion "30.0.2"
 7
8
9
       defaultConfig {
           applicationId "com.tanjung.mysqlpro"
10
           minSdkVersion 16
11
           targetSdkVersion 30
12
           versionCode 1
13
           versionName "1.0"
14
15
           testInstrumentationRunner "androidx.test.runner.
16
   AndroidJUnitRunner"
17
       }
18
       buildTypes {
19
20
           release {
